

The boxes a finished unified theory must check

Box a GUT must check	ED status
Minimal foundation	✓ strong – commitment + participation; one process does every job
Quantum mechanics from the substrate	✓ reconstructed (Gate 1; residual = Solèr rigor)
Gravity (GR + dark matter + dark energy)	✓ closed (khronometric GR-I..IV + khronon MOND/DE)
QM + gravity unified	✓ distinctive – the same arrow is khronon (gravity) and pointer basis (QM)
Gauge forces $SU(3) \times SU(2) \times U(1)$	✓ structure derived; ⚠ why exactly {1,2,3} is an inherited wall
Charge quantization	✓ from topology (B4 integer winding)
Chirality / parity violation	✓ stage built by ED – γ^5 = arrow $\times$ spontaneous orientation grounded; parity violation provably spontaneous if it occurs (transport-level theorem); ⚠ which force is chiral inherited (rep-theory)
Matter content (generations, masses, mixing)	✓ spinor skeleton built – spin- $\frac{1}{2}$ from tethering, chirality casting settled; ⚠ generations, masses, mixing value-inherited; relativistic spinor bridge gated on T4
The constants (α , mass ratios, Λ)	✎ inherited by ED's own result (no intrinsic scalar) – structural fact, not a hole
Internal consistency (anomalies)	✓ conservation (B4) + clean-vector baseline (transport-level); nontrivial cancellation inherited; one candidate T4-gated
Novel falsifiable predictions	✓ several (Paper_101) – the undeniability axis
